

Compare FusionAuth to Cognito

Cognito is part of the Amazon Web Services family and provides a simple login and registration system that you can quickly combine with other AWS services. Like all AWS services, Cognito is a fully cloud-hosted, multi-tenant solution.

In contrast, FusionAuth is a full-service platform that gives you complete control of your users and data. This explains many of the differences between Amazon Cognito and FusionAuth below.

FusionAuth also installs on any server, anywhere in the world, for complete user data control. Use the chart below to compare our features and read more in our [API documentation](#).

	Cognito	 FusionAuth
Free for unlimited users		✓
Authentication for web & mobile applications	✓	✓
OAuth token & API key management	✓	✓
Reporting & analytics		✓
Unrestricted users & groups		✓
